

smartPM Power User Suite

Gain a comprehensive overview of your Unit4 FP&A (prevero) model landscape using the Model Navigator and enhance your system's performance with the Performance Analyzer in the Power User Suite.

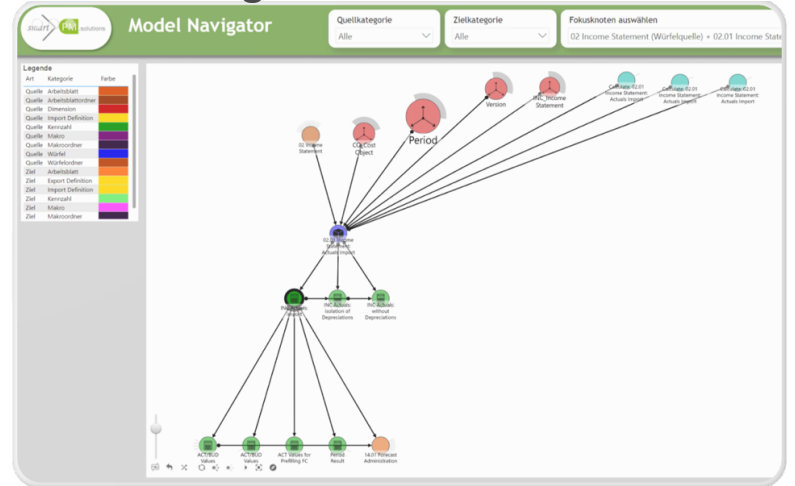

Do you want to know?

- 1 How does your current planning model work? Overview of cubes, imports and KPI connections.
- 2 Which cubes are actively being used?
- 3 Where are data imports located, and where are manual inputs required?
- 4 What reports are available? How frequently are they used and by whom?
- 5 Which cubes, macros, or reports are causing performance issues?
- 6 Where is optimization potential for power user (reference errors, main memory usage)?

Performance Analyzer

Model Navigator

Key Benefits

Interactive Model Visualization

Perfect data visualization with Power BI - Simple and tailored to your requirements.

Improve Data Quality

User-friendly error detection and easy resolution of duplications.

Boost Performance

Reduce loading times and costs by optimizing storage and memory usage. Avoid reference errors.

Fast, Effective Implementation

Prompt, competent execution of all your requirements by project-experienced consultants.

Knowledge Management

Easily visualize your complete data model architecture and quickly grasp all connections.

Clear Data Structure & Reports

Streamline reporting and planning processes, enhancing report quality.
